

Direct Digital

Direct digital printing involves the transfer of ink directly from the print heads of an inkjet machine to the product. It can be used to produce both full colour and closely matched spot colour branding on flat or slightly curved surfaces.

BEST FOR

Coasters, glassware, flat panels, slightly curved products and items needing white underbase on dark surfaces

LEAD TIME

Dried instantly, so products can be shipped immediately

COLOURS

Full colour plus white underbase. Metallic and neon/fluorescent colours cannot be reproduced.

ARTWORK NEEDED

Vector or bitmap at 300DPI at actual print size. Add a 3mm bleed if artwork bleeds off the product.

AVAILABLE FOR

Promotional Items Business Items Tech & Power Personal Products

ADVANTAGES

- Ideal for printing dark coloured products as a layer of white ink can be printed under the artwork
- Variable data including individual names is available on select products
- Dried instantly so products can be shipped immediately
- Offers larger print areas on many products and can print very close to the edge of flat products
- Only one set up charge is required regardless of the number of print colours

LIMITATIONS

- Some colours cannot be reproduced including metallic and neon/fluorescent colours
- The size of branding areas is limited on curved surfaces
- Larger print areas can be more expensive
