

Rotary Screen Print

Screen Printing is achieved by forcing ink through a fine mesh screen with a squeegee onto the product. The rotary version is ideal for branding cylindrical objects with the same crisp, opaque finish as flat screen printing.

BEST FOR

Cylindrical products such as drinkware, bottles and flat objects needing bold, opaque branding

LEAD TIME

Most screen print inks dry quickly and can be shipped immediately after printing

COLOURS

Up to 5 spot colours with tight multi-colour registration; fluorescent, metallic gold and silver inks available on select products

ARTWORK NEEDED

Editable vector artwork required. Fonts should be converted to outlines/objects.

AVAILABLE FOR

Drinkware Outdoor & Leisure

ADVANTAGES

- Large print areas are possible on flat products
- Close PMS matches are possible on white or light-coloured products
- Most screen print inks dry quickly and can be shipped immediately after printing
- Fluorescent, metallic gold and silver inks are available on select textile products
- Many products can print with tight multi-colour registration, with some products able to be printed using up to five colours

LIMITATIONS

- Close PMS matches are more difficult on darker products and will only be approximate. In some instances, a white base will create a better print
- Unable to print variable data
- Each colour requires its own setup charge
