

Foil Printing

A printing method that applies a metallic foil onto a flat surface using heat and pressure. This method utilises modern digital foiling, which is more cost-effective and eliminates the need for plates or stamps, allowing for direct printing from a digital file to the product. The printing will inherit the texture of the substrate, and the available foil colour options include Gold, Silver and Copper.

**BEST FOR**

Notebooks, diaries, journals and flat-surface products needing a premium metallic finish

COLOURS

Gold, Silver and Copper foil options. Finish varies on soft-touch PU vs Standard PU and textured substrates.

LEAD TIME

Can be shipped as soon as printing is finished

ARTWORK NEEDED

Vector artwork required. Fonts should be converted to outlines/objects. Minimum line thickness 0.4mm on smooth substrates and 1mm on textured substrates.

AVAILABLE FOR

Business Items / Gift Packs / Packaging / Personal Products

ADVANTAGES

- Higher perceived value than other forms of branding
- The product can be shipped as soon as printing is finished
- Offers variable data such as individual naming
- The foil is flexible which means it is suitable for softcover notebooks

LIMITATIONS

- Detailed artwork can get lost on textured substrates
- Min line thickness 0.4mm for smooth substrates
- Min line thickness 1mm for textured substrates
