

Pad Print

Pad printing uses a silicone pad to transfer an image to a product from a laser etched printing plate. It is one of the most popular and affordable ways of branding promotional products due to its ability to reproduce images on uneven or curved products and print multiple colours in a single pass.

**BEST FOR**

Pens, drinkware, USB drives, small tech and uneven or curved promotional products

COLOURS

Up to 6 spot colours with tight multi-colour registration. Metallic gold and silver ink available. White under base available for darker products.

LEAD TIME

7-9 working days; some inks require a curing period before shipping

ARTWORK NEEDED

Vector editable artwork required. Fonts should be converted to outlines/objects. Minimum detail 0.4mm, minimum text size 5pt.

AVAILABLE FOR

Drinkware / Promotional Items / Tech & Power / Business Items / Outdoor & Leisure

ADVANTAGES

- Ideal for printing on curved or uneven products
- Prints sharp, clean images with detail as fine as 0.4mm; minimum text size is 5pt
- Close PMS matches are possible on white or light-coloured products
- Metallic gold and silver ink are available
- Can offer a white under base for darker products that require it
- Many products can print up to 6 colours with tight multi-colour registration

LIMITATIONS

- Halftones cannot be consistently reproduced
- Unable to print variable data such as individual naming
- Close PMS matches are more difficult on darker products and will only be approximate; a white base creates a better print
- Some pad print inks require a curing period before the product can be shipped
- Each colour requires its own setup charge
- Neon/fluorescent colours are not available
