

Rotary Digital Print

Direct to product rotary digital printing involves the transfer of UV ink and a varnish coating from inkjet print heads. It is used to produce detailed gloss artwork using both closely matched spot colours and full colour branding.

BEST FOR

Cylindrical products such as drinkware and bottles needing detailed full-colour gloss prints

COLOURS

Full colour plus spot colour matching, with gloss varnish

LEAD TIME

Production speed is limited so lead times can be longer in some cases

ARTWORK NEEDED

Vector or bitmap artwork accepted. Supplied bitmaps must be higher than 300DPI at actual print size. Fonts should be converted to outlines/objects.

AVAILABLE FOR

Drinkware / Tech & Power

ADVANTAGES

- Ideal for large or complex full colour gloss prints
- The print is dry and ready to ship as soon as the product is printed
- Only one setup charge is required regardless of the number of print colours
- No loss of print vibrancy, even on darker products

LIMITATIONS

- Production speed is limited so lead times can be longer in some cases
- Some colours cannot be reproduced including metallic and neon/fluorescent colours
- As the print does not wrap completely around the product, there is a small gap between the start and end of the print
- More expensive than other branding options
