

Sublimation Print

Dye sublimation print is used for branding products that have a special coating on them, or fabrics suitable for the sublimation process. A transfer is produced by printing sublimation ink onto transfer paper and then heat pressing it onto the product.

**BEST FOR**

Coated products and fabrics suitable for sublimation, items needing vivid full-colour or edge-to-edge branding

LEAD TIME

Standard sublimation lead time applies

COLOURS

Full colour CMYK - white, metallic and neon/fluorescent colours cannot be reproduced

ARTWORK NEEDED

Vector or bitmap artwork accepted. Supplied bitmaps must be higher than 300DPI at actual print size. A 3mm bleed must be added if the artwork bleeds off the product. Fonts should be converted to outlines/objects to avoid font conflicts.

AVAILABLE FOR

Apparel / Headwear / Bags & Totes / Drinkware / Outdoor & Leisure

ADVANTAGES

- Sublimation ink is a dye so there is no ink build-up. The finished print is embedded in the product
- Ideal for producing vivid full colour images as well as closely matched spot colour branding
- Variable data including individual names is available on select products
- Edge-to-edge branding can be achieved on some products
- Only one set up charge is required regardless of the number of print colours

LIMITATIONS

- Can only be used on suitable products with white surfaces
- Some colours cannot be reproduced including white, metallic, and neon/fluorescent colours
- Fine detail/text may experience minor colour bleed across adjacent design elements
